¹ No incluidos los datos del Hospital de Txagorritxu y Hospital Universitario Donostía.

El SIMCAPV funciona de manera estable desde 1993 y quedó incorporado al Sistema de Vigilancia Epidemiológica creado mediante el Decreto 312/1996 del Gobierno Vasco.

El Sistema de Información Microbiológica de la Comunidad Autónoma del País Vasco (SIMCAPV) tiene como objetivo recoger datos sobre la patología infecciosa en la CAPV confirmada por laboratorio de acuerdo a una lista establecida previamente, que permite unificar los criterios de declaración de todos los laboratorios, para así proporcionar información específica e imprescindible para la vigilancia epidemiológica (Las variaciones metodológicas de los distintos sistemas de información pueden originar diferencias en la contabilización de casos)

Lista de microorganismos a declarar:

BACTERIAS: Bartonella spp, Bordetella pertussis, Borrelia burgdorferi, Borrelia recurrentis, Brucella spp, Campylobacter spp, Corynebacterium diphtheriae, Coxiella burnetti, *Chlamydomphila pneumoniae*, Chlamydia psittaci, Chlamydia trachomatis, Escherichia coli enterohemorrágica, Francisella tularensis, Haemophilus ducreyi, Haemophilus influenzae, Legionella pneumophila, Leptospira spp, Listeria monocytogenes, Mycoplasma pneumoniae, Neisseria gonorrhoeae, Neisseria meningitidis, Salmonella typhi y paratyphi, Salmonella spp, Shigella spp, Staphylococcus aureus meticilin resistente, Streptococcus agalactiae, Streptococcus pneumoniae, Treponema pallidum, Vibrio cholerae, Vibrio spp, Yersinia spp.

MICOBACTERIAS: Complejo Mycobacterium tuberculosis y otras micobacterias.

VIRUS: Adenovirus, enterovirus, herpes simple tipo 2, poliovirus, rotavirus, virus de la gripe, hepatitis A, hepatitis B, hepatitis delta, parotiditis, rubéola, sarampión, respiratorio sincitial.

PARÁSITOS: Entamoeba histolytica, Echinococcus granulosus, Fasciola hepática, Leishmania spp, Plasmodium spp, Taenia spp, Toxoplasma gondii, Trichinella spiralis.
